

Seednergy

MOBILE DESIGN SYSTEM · FINAL · STONE GROUND, LIFTED CARDS, CYCLE GAUGE

Warm stone ground at #E8E2D4; every raised surface one step lighter at #EFEADF, so layer one separates without leaving the one-material idea. One exception: text inputs sit inset on near-white, because a field must look like it receives. Each raised element carries a tight, hard bevel — bright inner edge top-left, warm inner edge bottom-right — so components read as domed rather than cut out. Cycle progress is never a bar: it is the logo's oval, filling, with the day count inside. Moment screens invert to forest and carry no tab bar.

01 — SURFACING: TWO TONES, RAISED, ONE EXCEPTION

RAISED + BEVELLED · #EFEADF ON #E8E2D4

Cards sit one step lighter than the ground: #EFEADF on #E8E2D4. Warm shadow down-right, near-white up-left. r1 for anything in a list, r2 for the one hero card per screen.

THE BEVEL · HARD EDGE ON EVERY RAISED ELEMENT

Two inner shadows under the outer pair: **inset 1.5px 1.5px 1px** white top-left, **inset -1.5px -1.5px 1px** warm bottom-right — almost no blur, so the edge reads as a machined lip rather than a soft fade. Outer shadows are tight too: offset roughly equals blur. Applied to every raised element. OS chrome — status bar, keyboard — never receives it.

IN THIS SYSTEM

- ✓ Ground is **#E8E2D4**; every raised surface is **#EFEADF** — one step lighter, so layer one separates from the canvas without leaving the one-material idea.
- ✓ Text inputs are the one exception: inset, on a near-white fill, because a field has to look like it receives.
- ✓ Two greens, two jobs: olive for action and brand, sage for growth and progress.
- ✓ Forest is the dark anchor — the hierarchy has a bottom end.
- ✓ Progress is never a bar. It is the logo's oval, filling, with the day count inside.
- ✓ Moment screens invert to forest and carry **no tab bar**.

INK AT THREE STRENGTHS — ONE HEX, THREE OPACITIES

100% · titles, body 68% · secondary copy 48% · labels, meta

Five hexes only. Greys are ink at reduced alpha so nothing goes cold against the stone.

DIVISION OF LABOUR

Terracotta deep — every screen title in Crimson, the active tab, and the **second layer**: any panel nested inside a card takes it with stone type. The strongest signal in the app, reserved for the coach's voice and the next action.

Olive — the one primary button per screen, the brand mark, the completion badge, and the "new" status.

Sage — growth only: the cycle-gauge fill and stage labels. Never a button, so action and progress never look alike.

Forest — the dark anchor: inverted grounds, "on track", and every named item in a list.

Alert clay — “needs check” and nothing else. Its scarcity is what makes it work.

Ink — all body and label type, and inactive tab icons; never a card background.

Warm sand — photo mats and the tab bar's own ground.

INSTRUCTIONS

caption
Inter 400 · 12/16

Day 3 · Next: Check moisture

Crimson Text carries all named and actionable text — screen titles, card names, button labels, coach-tip headlines. Inter is reserved for body copy, captions, uppercase labels and sub-navigation (filters, stage track, tab bar). Crimson runs ~2px larger than the Inter it replaces to match x-height.

SPACE · 4PT BASE

481216202432

Screen gutter 20 · card padding 16 · gap between raised cards 14 minimum — relief needs room to breathe or shadows collide.

RADIUS — SOFTER THAN V1

HARVEST

STATUS PILLS & PROGRESS

On track

Needs check

New

Harvested

Best value

Status is a filled pill, never a coloured word on stone — forest for on track, olive for new and harvested, alert clay for needs check. Type is always stone. Only archived states stay neutral. All three carry the same relief so the fill is the only variable.

PROGRESS — THE CYCLE GAUGE

3 OF 7

12

Never a bar. The gauge is the logo's oval, sage filling clockwise from the top, day count inside — 52×82 for the hero, 38×60 in a list. stroke-dasharray 250, dashoffset 250·(1–pct).

NUMBERED STEP

1

Snip stems about 1/2 inch above the soil line using clean scissors.

05 — SCREENS & FLOW Tap through — buttons advance; stage track, filters and steps are live. Screen 05 shows the inverted moment treatment.

COACH SUMMARY

Your cress is showing excellent germination density. The stems are strong and the first cotyledon leaves are vibrant green.

NEXT ACTION

Maintain moisture

Check again in 48 hours.

Back to cycle

HELPFUL ADVICE?

Yes

No

P9 · CONVERSATION

9:41

ASK THE COACH

⚠ CURRENT RESULT

Likely too little light · Basil Day 12

Should I move it outside or just closer to a window?

Today · 3:14pm

Inside by a brighter window is better for now. Sudden outdoor shifts can shock delicate seedlings. Aim for a south-facing spot if possible.

NEXT ACTION

Place on south windowsill

Ask one specific question...

P14 · STATS

Reading the library

P4 (home), P5 (grouped list), P6 (detail) and P1-inverted (moment) are the five screens in section 05. The eleven here complete the set. P1 alone carries 22 of the 75 screens, P6 carries 12 — build those two well and most of the app follows. Every screen above is composed only from the tokens in sections 02–04; nothing here introduces a value that isn't in **handoff/tokens.css**. Note P9: the keyboard is system chrome and is deliberately flat — app relief stops at the app's own surfaces. P2: SSO buttons carry olive labels but stay unfilled, so the screen keeps exactly one primary. And P14: rank progress stays a bar, because a rank is not a cycle — the oval gauge is reserved for growth toward harvest, and spending it on points would dilute the one place it means something.

07 — HANDOFF NOTES

Ship relief as two tokens

Two tokens compose every surface: `shadow.raised` (+ .1g for hero cards) and `shadow.beve1`, always applied together. Colour

Watch in build

Bevelled relief needs four shadows per element (two outer, two inner) with tight blur radii — platform elevation APIs can't express it, so cast it

Still open

Real photography, the remaining seven screens (Explore, seed detail, Garden, the three paywalls

tokens stay semantic: canvas, sand, action, accent, ink — plus an inverted set for moment screens.

as layered shadows. Keep 14px minimum between raised elements.

— the paywalls take the inverted ground), dark mode, and empty/error states.
